

File Types Blocked in MS Outlook Messages

Outlook messages will be scanned for unsafe file types. View the list of blocked file types below. When you send an Outlook message containing a file type that is on the unsafe-blocked list, you will receive an email from "DoNotReply_BlockedEmailNotice@delaware.gov" stating the message will not be delivered.

When there is a business need to message a file identified on the unsafe-blocked list, you may use Egress encryption to deliver the message. Visit **How Do I? - Department of Technology & Information (DTI)** webpage for instruction regarding the use of Egress.

BLOCKED FILE TYPES:

ace	Lnk	pcd
ade	mad	pif
adp	maf	plg
ani	mag	prf
